 Re: Vitalitymeasurements dots

In September and October, Mr. van der Starre developed five different power symbols. These five dots have been programmed with high vital frequencies.

After programming, the following energetic properties of these dots were measured:

1. The Bovisvalue, the biophysical energy content
2. The Positivity of this Bovisvalue
3. The Intention of the Producers
4. The Presence of Negative Information in the dot
5. How Good for human health when used properly
6. The Electromagnetic Pollution radiating from the dots

Figure 1: the five different dots

	Parameter	material type size	Alu middle 19.4 mm	Alu big 40 mm	Cu small 12 mm	Cu middle 20 mm	Cu big 40 mm
1	Bovisvalue		461,000	452,000	503,000	499,000	501,000
2	Positivity of this Bovisvalue		10	10	10	10	10
3	The Intention of the Producers		10	10	10	10	10
4	The Presence of Negative Information in the dot		0.001	0.001	0.000	0.000	0.000
5	How Good for human health when used properly		10	10	10	10	10
6	The Electromagnetic Pollution radiating from the dots		0.000	0.000	0.000	0.000	0.000

Table 1: Energetic quality of the five dots measured by means of radiesthesia

The first parameter has been measured on the scale of Bovis. The other five parameters are measured on a scale from 0 to 10. Parameter 4 and 6 should be as close to 0 as possible. Parameters 2, 3 and 5 should be as close to 10 as possible.
